\*Sites with cellular network coverage

Interactively  
controlled  
cameras

Monitoring and control images via:  
Smartphone, Tablet, PDA, Laptop, Desktop

### Only place up the device – no installation, no technical configuration

SmartFoX*mobile* is ideal for occasional, temporary surveillance operations at any location. The only condition is G3/G4 mobile network coverage. Whether for police, security companies, shopkeepers, government agencies, municipal governments, property management, construction companies, etc., this video device is equipped with two cameras and own solar panels. It is placed very quickly and then without tech. configuration immediately ready for use.

Control video cameras easily through a user-friendly menu directly by cell phone or over the Internet. No matter whether at day or at night SmartFoX*mobile* monitors any desired object or group of people. In stunning picture quality, the data is immediately transmitted to the IMM (Interactive Mobile monitoring) video server, transcoded and stored on an external web server. Double security: all images and data are transmitted at a high encryption of 2048 bits.

### Features / Specifications:

- Battery life time: 5 days without sun
- Very high security:
  - Images are stored on the video server and the Web server
  - Image data is transmitted with 2048 bit encryption
